---

Just visit our website and download the NMR program with the most charming interface you have ever seen. There are no forms to fill, no name to give, no trace to leave. iNMR is just a single click away.

It goes without saying that the most advanced NMR software requires the most advanced operative system; iNMR runs on Mac OS X. Every maker claims that their software is the most technologically advanced in the market. So what's so different about iNMR? The "amateurish" way it has been written: a fundamental pillar of iNMR. Other companies outsource the production of their software or assemble multi-purpose pieces that were written by people who apparently ignore what NMR is really about. It's no wonder that so many programs can't even draw the simplest 1D spectrum. iNMR goes back to basics. At last, with iNMR, you can see and interact with your spectra in the most natural way, the way it should have always been done.

Simply visit [www.iNMR.net](http://www.iNMR.net) and see for yourself. Not only does it provide the complete manual with illustrations, it also puts forward the many new ideas that iNMR has introduced into the world of NMR computing (and so far unmatched by others): transparent file management, trouble-free simulations, visual weighting, metabonomics toolbox, intuitive and original tools (including a cutter!), clean interface, chemistry-savvy annotator, unified overlay manager, the dual behaviour of windows, multipaging...

Last but not least: you can write directly to the author, with your feedback, so that iNMR can cater for your needs. Ask for a new feature and there is good a chance that it will be implemented. For free.

Whether you are a chemist, a biologist or a physician, iNMR will speak your language. Thousands of jaws have already dropped. Yours can too.
